

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A digital image storage for use with a digital camera having a memory capable of storing digital data of images and other digital data, the digital image storage comprising:

a connector for communicating with the digital camera, the connector includes a docking station for coupling with the digital camera;

a controller that causes the digital camera to transmit ~~only~~ the digital data of the images, but not the other digital ~~data~~, data of any stored documents, from the memory of the digital camera to the digital image storage while the digital camera is coupled to the connector; and

a storage medium that stores the transmitted digital data of the images.

2. (Previously Presented) The digital image storage according to claim 1, wherein the controller causes the digital camera to transmit the digital data of all the images in the memory to the digital image storage.

3. (Previously Presented) The digital image storage according to claim 1, wherein the digital data of the images includes still images and motion picture images.

4. (Previously Presented) The digital image storage according to claim 1, wherein the controller causes the transmission of the digital data of the images in order of the time when respective digital data of images were taken by the digital camera.

5. (Previously Presented) The digital image storage according to claim 1, wherein the controller detects a signal through the connector to cause the transmission of the digital data of the images.

6. (Canceled)

7. (Previously Presented) The digital image storage according to claim 1, wherein the docking station charges a battery of the digital camera while the digital camera is coupled with the docking station.

8. (Previously Presented) The digital image storage according to claim 1, wherein a signal that causes the controller to start the transmission of the digital data of the images is output from the docking station after the coupling of the digital camera with the docking station.

9. (Currently Amended) A storage medium that stores a computer program that is executable by a controller of a digital image storage that can be used with a digital camera having a memory capable of storing digital data of images and other digital data, the digital data of the images being transmitted from the digital camera memory to the digital image storage by way of a docking station capable of being coupled with the digital camera, the computer program comprising instructions to cause the controller to perform the steps of:

detecting receipt of a signal from the docking station to initiate the transmission of the digital data from the memory of the digital camera to the digital image storage;

in response to the signal, performing the transmission of the digital data of the images, but not the other digital ~~data~~, data of any stored documents, from the memory of the digital camera while the digital camera is coupled to the digital image storage through the docking station; and

storing the transmitted digital data of the images in the digital image storage.

10. (Currently Amended) A digital image storage system for use with a digital camera having a memory capable of storing digital data of images and other digital data, the system comprising:

a docking station on which the digital camera can be placed to communicate with the digital camera; and

an image storage in communication with the docking station, the image storage including a storage medium and a controller that causes the transmission of the digital data of the images, but not the other digital ~~data~~, data of any stored documents, from the memory of the digital camera through the docking station and to the storage medium of the image storage while the digital camera is placed on the docking station.

11. (Previously Presented) The digital image storage system according to claim 10, wherein the controller causes the digital camera to transmit the digital data of all the images in the memory to the image storage.

12. (Previously Presented) The digital image storage system according to claim 10, wherein the digital data of the images includes still images and motion picture images.

13. (Previously Presented) The digital image storage system according to claim 10, wherein the controller causes the transmission of the digital data of the images in order of the time when respective digital data of images were taken by the digital camera.

14. (Previously Presented) The digital image storage system according to claim 10, wherein the controller detects a signal to cause the transmission of the digital data of the images.

15. (Previously Presented) The digital image storage system according to claim 10, wherein the docking station charges a battery of the digital camera while the digital camera is coupled to the docking station.

16. (Previously Presented) The digital image storage system according to claim 10, wherein a signal that causes the controller to start the transmission of the digital

data of the images is output from the docking station after the placement of the digital camera on the docking station.

17. (Previously Presented) The digital image storage system according to claim 10, wherein the docking station has a shape to fit a bottom of the digital camera.

18. (Previously Presented) The digital image storage system according to claim 1, wherein the docking station has a shape to fit a bottom of the digital camera.
